Subject: Two port diverter valve

In December 2000, we experienced a flue gas leakage flowing from a crack on a stainless steel two port diverter valve.

Despite the fact that another valve company manufactured the two port diverter valve, Remosa made two site inspections to our Refinery. Remosa found the best solution to our problem with the unit in operation. They made the detailed engineering, fabrication and positioning by welding of a protective shield to the valve that provided good performance of the valve and unit.

The repair work was successful. It was performed safely and in cooperation with AgipPetroli technicians.

Please extend our thanks to the Remosa technician that made the repairs.

Best Regards,
